Cycle-Flex bollard model 100

The increasing activity on bicycle tracks demands new solutions. Therefore ERDI developed the Cycle-Flex bollard and included it in their product range.

The various models of flexible bollards absorb the shock of a collision so there is less chance of serious injury. As the lower part is made of metal, cars won't be able to drive over the bollard.

Thanks to its circular design will this detachable cycle-flex bollard with its metal lower part fit in the concrete basis of model 90. Even after being knocked at several times, it is not necessary to replace it immediately.

The Cycle-Flex bollard can be produced with a flashing ledlight (Solar Flash), which means better visibility during the night. The Solar Flash is made of chip-proof polycarbonate and is integrated in the top of the bollard.

Cycle Flexpost model 100

- Height: above ground level H= 750 mm
- Diameter: Ø 100 mm
- Material: synthetic material
- Colour: striking red, fitted with 3 retro-reflecting bands
- Foundation: thermo galvanized, according to NEN-EN-ISO 1461
- ERS Bolting System: Δ 8 mm
- Concrete Basis: 295 x 295 x 350 mm

Options

- Solar Flash led light
- Available designs are: fixed, removable or collapsible folding
- Different bolting system
- A separate cover for the basis

** The Cycle-Flex bollard is the intellectual property of ERDI and thereby protected.*
